SKILLS

Laravel

Python

System Administration

API Usage & Integration

Git

LANGUAGES

English

Full Professional Proficiency

Persian

Native or Bilingual Proficiency

INTERESTS

Data Science

UI Design

Machine Learning

WORK EXPERIENCE

Freelance Developer Self-Employed

04/2018 - 04/2020

Remote

During my time as a freelance developer, I've worked temporarily with many companies, one in FinTech and the other acting as an "open source" startup.

Achievements/Tasks

- Design and Deploy of an expandable management website.
- Deployment of an SMS API integration with full documentation.
- Utilized Laravel to create a medium-complexity database (polymorphic relations).
- Modified a website's existing UI to match the expectation of the owner.

PERSONAL PROJECTS

ScaleTG (10/2020 - Present)

- a Telegram Bot Framework focused to provide scalability outside the box
- Written in Python and documented using Sphinx
- Written with the idea of molecularity, utilizing git submodules

Personal Automation (10/2020 - Present)

- Written as a set of open-source python script meant to automate or otherwise ease the process of some tasks
- Written a file sorter that when put in CRON, is responsible for sorting one's downloads into multiple folders
- Written a "shell history parser" for Unix-based systems to figure what packages a user has installed
- Most scripts written in this project were built on bare Python and are meant to work on all Unix-based systems

Telegram Export Analyzer (11/2020)

- Written as a JSON parser in Python, this project has been for extracting data and gaining more insight into that data
- This set of scripts is again written with OOP concepts in mind, while remaining user-friendly
